# P03 – Work Breakdown Structure

WORK BREAK DOWN STRUCTURE TOOLS

An online tool is used to develop work breakdown structures as it's more efficient and because it's freely available. Since a graphical user interface is provided with a default template, adjustments can be easily made.

As seen above, a user friendly interface is provided to categorize the activities and to have separate layouts based on the requirements of the project. Online distribution is also possible so that communication among team members is much easier.

Work Breakdown Structure

Website Development and database management system

Inception
- Developing class diagrams
- Developing sequence diagrams
- Designing the outline of the website
- Interface design
- Database design
